

PROMICAM 3-3CP

3.1 MP color USB 3.0 digital camera with 2nd generation of SONY® Pregius CMOS sensor with global shutter represents a viable alternative to CCD cameras for excellent price.

New Generation of CMOS Sensor Exceeds CCD Technology

PROMICAM 3-3CP USB 3.0 camera represents a viable alternative to CCD cameras. Used 2nd generation of SONY® Pregius CMOS sensor exceeds CCD technology in several parameters.

High Image Quality and Excellent Color Reproduction

Sensor with 1/1.8" diagonal provides high image quality and excellent color reproduction.

Global Shutter

The sensor uses global shutter, which enables observation of fast moving objects without image distortion.

High Live View Frame Rates Suitable for "Live Imaging" Applications

Modern USB 3.0 interface provides high live view frame rates, while CPU load remains low. Live view in full 3.1 MP resolution can be displayed with frame rate up to 36 fps, which exceeds maximal frame rate of 3 MP CCD cameras. Live view in Full HD (1920 x 1080 - using ROI feature) can be displayed with frame rate up to 51 fps.

High Sensitivity, High Dynamic Range and Low Noise Level

The used 2nd generation of SONY® Pregius CMOS sensor brings high sensitivity comparable to sensitivity of common CCD sensors. The values of dynamic range and noise level exceed the values of common CCD sensors.

Support in QuickPHOTO Programs

QuickPHOTO programs for digital photomicrography provide full control of camera's features, e. g.: live view display, manual and automatic exposure, white balance, black balance, gain, gamma, hue, shading correction, measurements in a live view and many more.
